# IS YOUR HOME POISONING YOUR CHILD WITH LEAD?

## IF YOUR HOME WAS BUILT BEFORE 1978

There's a good chance that it contains lead paint. Lead is poison, and a child who eats lead paint chips, or breathes lead paint dust can get very sick. Your child could be poisoned already and you might not know it.

## PROTECT YOUR FAMILY

Please call 402-451-2939 for help. In the meantime here are some things that may help:

- If you rent, tell your landlord about peeling or chipping paint.
- Clean up paint chips.
- Clean floors, window frames, window sills, and other surfaces weekly with warm water and soap.
- Make sure to rinse sponges and mops after cleaning dirty or dusty areas.
- Wash children's hands often, especially before they eat and before nap and bedtime.
- Keep play areas clean. Wash bottles, pacifiers, toys, and stuffed animals regularly.
- Keep children from chewing on window sills or anything that is painted.
- Make sure your children eat well. Kids with a good diet absorb less lead.

## KEEP YOUR CHILDREN SAFE

- Take your children to the doctor and have them tested for lead.
- If you don't have a doctor call our number for help.
- Having your child tested is the only way to know if they have been poisoned.

**WIPE OUT LEAD.**
